Pegasos Email Marketing Software

Live Pro

Step-by-step guide to deploy on Hostinger VPS with domain pegasos.in. Includes costs, DNS, HTTPS, SendGrid, and production checklist.

Architecture

https://app.pegasos.in -> React UI (port 3000)
https://api.pegasos.in -> Django API (port 8000)
PostgreSQL runs inside VPS via Docker
SendGrid sends outbound email

Part 1 - What you need to pay

Required (must pay)

- Hostinger VPS (Ubuntu, 2 GB RAM): about Rs 399-799/month

- Domai

Optional (not required to start)

- SendGrid paid plan: about $15-20/month for more than 100 emails/day

- Hostin

Free (no payment)

- Docker, PostgreSQL (in Docker), SSL/HTTPS (Caddy or Let's Encrypt)

- SPF, D

Part 2 - Before you start

- Domain pegasos.in in Hostinger

- SendG

Part 3 - Step-by-step deployment

Phase A - Create VPS (Hostinger)

- hPanel -> VPS -> Set up VPS

- Choos

Phase B - Connect and install Docker

From your PC (PowerShell):

```
ssh root@YOUR_VPS_IP
```

On the VPS:

```
apt update && apt upgrade -y
curl -fsSL https://get.docker.com | sh
apt install -y git
```

Phase C - Upload project

- Git: cd /opt && git clone YOUR_REPO email-marketing

- Or zip

Phase D - Production .env file

On VPS: nano /opt/email-marketing/.env

```
SECRET_KEY=paste-long-random-string
DEBUG=False
ALLOWED_HOSTS=api.pegasos.in,app.pegasos.in,localhost
CORS_ALLOWED_ORIGINS=https://app.pegasos.in
SITE_URL=https://api.pegasos.in
REACT_APP_API_BASE_URL=https://api.pegasos.in/api
SECURE_SSL_REDIRECT=True
SECURE_HSTS_SECONDS=31536000
EMAIL_ENCRYPTION_KEY=your-existing-key
SENDGRID_API_KEY=your-sendgrid-key
CAMPAIGN_WARMUP_ENABLED=True
DAILY_CAMPAIGN_SEND_LIMIT=50
GMAIL_SEND_DELAY_SECONDS=5
GMAIL_SEND_DELAY_JITTER_SECONDS=3
INBOX_PRIORITY_PLAIN_ONLY=True
```

Generate SECRET_KEY: python3 -c "import secrets; print(secrets.token_urlsafe(64))"

Phase E - Start application

```
cd /opt/email-marketing
docker compose up -d --build
docker compose ps
docker compose exec backend python manage.py createsuperuser
```

Phase F - DNS in Hostinger

Domains -> pegasos.in -> DNS Zone. Add A records:

- Name: app -> Points to: YOUR_VPS_IP

- Name:

Phase G - HTTPS with Caddy (free SSL)

```
apt update && apt install -y caddy
nano /etc/caddy/Caddyfile
```

Paste into Caddyfile:

```
app.pegasos.in {
    reverse_proxy localhost:3000
}

api.pegasos.in {
    reverse_proxy localhost:8000
}
```

```
systemctl reload caddy
```

Open https://app.pegasos.in in browser.

Phase H - Email and SendGrid

- Add DMARC TXT on _dmarc in Hostinger DNS if not done

- SendG

Phase I - Firewall

- Allow ports 22 (SSH), 80 (HTTP), 443 (HTTPS)

- Do NO

Phase J - Verify production

- https://app.pegasos.in loads and login works

- Setting

Part 4 - Monthly cost summary

Starter production

- Hostinger VPS 2 GB: Rs 499-799/month

- Domai

When you scale (100+ emails/day regularly)

- SendGrid Essentials: about Rs 1200-1700/month

- VPS u

Part 5 - Maintenance

Deploy updates

```
cd /opt/email-marketing
git pull
docker compose up -d --build
```

View logs

```
docker compose logs -f backend
```

Backup database

```
docker compose exec db pg_dump -U email_user email_marketing > backup.sql
```

Part 6 - Production checklist

- VPS running Ubuntu + Docker

- .env: D

Part 7 - Timeline

- Day 1: Buy VPS, install Docker, deploy app, DNS, HTTPS

- Day 1:

Summary: You must pay for VPS (about Rs 500/month). Domain renewal and SendGrid paid plan are the other main costs. SSL, Docker, PostgreSQL, and DNS are free.
